

ASHWINI KUMAR

DevOps Engineer | Infrastructure & Automation

Bengaluru, Karnataka 560076 | +91 9873008752 | ashwini.kr.singh.020@gmail.com

<https://linkedin.com/in/dwinsi> | <https://github.com/dwinsi>

PROFESSIONAL SUMMARY

Results-driven DevOps and Infrastructure Engineer with 10+ years of experience specializing in Microsoft technologies, including Azure DevOps, PowerShell, and Python. Expertise in designing, integrating, and automating large-scale CI/CD pipelines for high reliability and cost efficiency. Extensive experience with the Microsoft Graph REST API and Azure DevOps REST API for automation solutions. Proven ability to troubleshoot production issues, collaborate cross-functionally, and enhance developer experiences through automation and best practices. Actively expanding into AI and LLM engineering, building hands-on projects across Retrieval-Augmented Generation (RAG), Model Context Protocol (MCP), and LangGraph agent orchestration. Microsoft certified in Azure AI (AI-102), DevOps (AZ-400), and Azure development (AZ-204).

TECHNICAL SKILLS

Cloud & DevOps: Microsoft Azure, Azure DevOps, Azure Pipelines, Azure Monitor, Application Insights, CI/CD Pipeline Design

Automation & Scripting: PowerShell (advanced), Python, Multithreaded Scripting, Log Analysis Automation

APIs & Integration: Microsoft Graph REST API, Azure DevOps REST API

AI & LLM Engineering: Retrieval-Augmented Generation (RAG), Model Context Protocol (MCP), LangGraph, LangChain, Vector Embeddings, PyTorch, Ollama

Microsoft 365: Exchange Online Administration, O365 Operations

Practices: CI/CD Optimization, Release Management, Production Troubleshooting, Incident Resolution, Cross-Functional Collaboration

PROFESSIONAL EXPERIENCE

Infra Transformation Specialist

Accenture, Bengaluru | March 2019 - Present

- Designed and implemented a multithreaded PowerShell script to scale reporting tools, improving efficiency and performance by 70% and reducing processing time from 10 hours to 3 hours.
- Developed and automated CI/CD pipelines using Azure DevOps, reducing deployment failures by 50% and improving release velocity by 40%.
- Architected and maintained scalable cloud-hosted CI/CD systems on Microsoft Azure, achieving 99.9% uptime and ensuring high reliability.
- Automated work item management and reporting using the Microsoft Graph REST API and Azure DevOps REST API, cutting manual effort by 80%.
- Troubleshoot production issues by analyzing logs, source code, and operational metrics, reducing incident resolution time by 60%.
- Developed PowerShell-based automation solutions, including log analysis, saving approximately 3 hours per day and increasing team productivity by 15%.

Analyst

HCL Technologies, Noida | October 2015 - March 2019

- Managed and maintained Microsoft O365 (Exchange Online) environments, ensuring smooth operations and issue resolution.
- Provided technical expertise in Exchange Online administration and troubleshooting.
- Developed PowerShell scripts to automate repetitive tasks and enhance operational efficiency.
- Introduced to Azure DevOps in 2018, beginning the transition into DevOps engineering.

Technical Support Associate

Minacs, Bengaluru | June 2014 - July 2015

- Provided technical support and troubleshooting assistance to customers, resolving 90% of issues on first contact and improving customer satisfaction.
- Gained foundational experience in IT operations and customer service, handling an average of 50+ support requests per week with fast resolution times.

CERTIFICATIONS

Microsoft Certified: Azure AI Engineer Associate (AI-102)

Microsoft Certified: DevOps Engineer Expert (AZ-400)

Microsoft Certified: Azure Developer Associate (AZ-204)

PERSONAL PROJECTS (SELF-LEARNING)

LLM From Scratch – <https://github.com/dwinsi/LLMfromScratch>: A self-directed series building a large language model from first principles in Python and PyTorch. Covers neural network fundamentals, transformer architecture, LLaMA-style components (RMSNorm, RoPE, SwiGLU), Grouped Query Attention, Mixture of Experts routing, and BPE tokenization.

RAG Knowledge Assistant - A Retrieval-Augmented Generation (RAG) pipeline that grounds LLM responses in a private document corpus. Implements document chunking, vector embeddings, semantic search over a vector store, and context-augmented prompting to reduce hallucination and deliver source-cited answers.

MCP Automation Server - A custom Model Context Protocol (MCP) server exposing infrastructure and reporting tools to LLM clients. Defines typed tool schemas and resource endpoints, enabling AI assistants to query and act on Microsoft 365 and Azure DevOps data through a standardized protocol.

LangGraph Multi-Agent Workflow - A stateful, multi-step agent orchestration built with LangGraph. Models an automation workflow as a directed graph of nodes with conditional routing, shared state, and cyclic reasoning, coordinating multiple tool-using agents to completion.

Saathi-CLI - An agentic AI command-line tool built with LangChain ReAct, running Gemma models locally via Ollama with LangSmith tracing.

EDUCATION

Bachelor of Engineering, Computer Science and Engineering

KSIT, VTU - Bangalore | GPA: 60% | 2010 - 2014

12th (PCM)

Ishan International Public School - Patna | 79% | 2007 - 2009

10th

DAV Public School - Patna | 78% | 2005 - 2007
